1. Once you have downloaded Eclipse, import "**Servlet_SumaitaH**", which is located in the folder titled "**Eclipse Projects".**
2. After opening **Servlet_SumaitaH,** ensure that a "lib" folder has been created in the folder**"WEB-INF"**. If not, create one and add the two files located in this repository's "lib" folder.

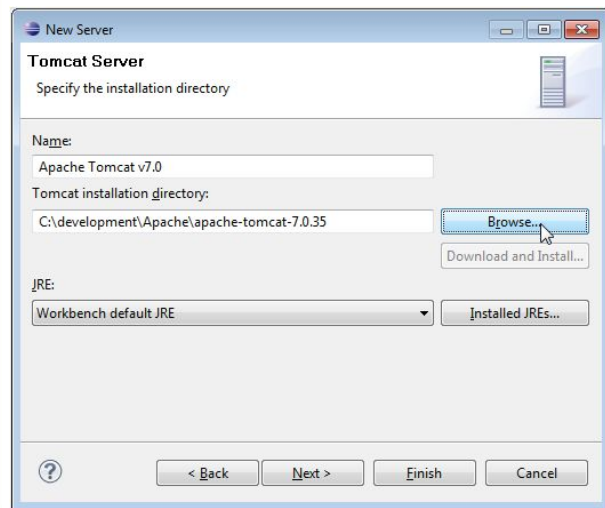

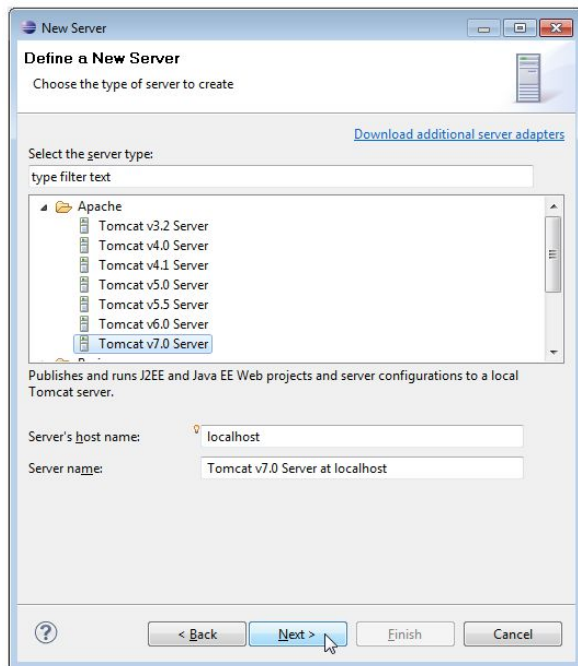

3. If these files are not located in your **Referenced Libraries**, be sure to add them. Right-click **Referenced Libraries -> Build Path -> Configure Build Path -> Add JARS**

Tomcat Installation

4. In run configurations for **Servlet_SumaitaH**, create a new server. The version is 8.5.37, choose this when defining a new server.

3. Right click on the servlet project, and run it on the server, which will generate the link
